ABSTRACT

Keeping your data light on it's feet

Recently after I presented at a data viz-related meetup someone asked me what motivates me and why do I do what I do? That really made me think - and my answer was that I want to help people not have to work so hard to get data to a place that allows them to do the good stuff: The analysis, maps, charts and graphs! Over the last three years Kspatial has worked with a number of clients to build out a matter-of-hours deployment of a serverless and scalable software solution that let's them connect any data viz solution they want to it. Join me to hear more about our new product - a really flexible, lightweight solution to help organizations get their data ducks-in-row.

BIO

Matt Krusemark has over two decades of real life, in-the-trenches, data wrangling and munging experience. He has led data-focused projects large and small that encompass analytics, model-based decision-making, and visualization solutions.
